

## Actenum releases DSO/Maintenance 3.0: advanced software for scheduling maintenance activities

### For Immediate Release

**VANCOUVER, BC, 19 Jul 2011** – Actenum Corporation today announced the production release of DSO/Maintenance 3.0, the latest version of its advanced software for rapid and reliable scheduling of maintenance activities in complex operational environments.

DSO/Maintenance saves organizations time and effort by automatically assigning crew and equipment resources to maintenance work orders, and sequencing these work orders in a schedule that meets or exceeds organizational objectives. At the same time, DSO/Maintenance ensures that all operational and business constraints are satisfied, while instantly calculating outcomes (in terms of user-defined key performance metrics) as schedules are manually fine-tuned by users.

The 3.0 release of DSO/Maintenance couples a powerful and flexible Gantt-based user interface—developed over the past eighteen months—with Actenum’s proven optimization technology, and provides new capabilities that include:

- Integrated scenario generation and analysis;
- Multi-objective optimization of any schedule, with built-in trade-off analysis;
- A goal-seeking feature that adjusts results to meet specific requirements;
- User configurable optimization and reporting;
- Extensive import/export facilities, and external database support.

“The 3.0 release of DSO/Maintenance is a complete solution for scheduling maintenance activities in large scale operations, and is the result of several years of development,” said Paul Maurer, Actenum’s CEO. “It enables organizations to move beyond manual approaches to dramatically improve maintenance-related decision-making and efficiency, and reap the benefits of optimum equipment utilization and production performance.”

### About Actenum Corporation

Actenum Corporation is a global software company that provides planning and scheduling solutions to the energy industry. By simplifying and improving production planning and scheduling, we enable our customers to enhance operational performance, and increase efficiency and profit.
